

# Gili Cohen

Boston, MA | (617) 982-9953 | Starting Availability: May 2026

[cohen.gil@northeastern.edu](mailto:cohen.gil@northeastern.edu) | [gilicohen12.github.io](https://github.com/gilicohen12) | [gili-cohen/](https://gili-cohen/) | <https://www.linkedin.com/in/gili-cohen3/>

## EDUCATION

**Northeastern University** | Boston, MA

*Exp. May 2026*

*Candidate for B.S. of Computer Science & Interaction Design*

*GPA: 3.86/4.0*

Relevant Coursework: Object Oriented Design, Algorithms & Data, Database Design, Machine Learning & Data Mining, Networks & Distributed Systems, Data Science Foundations, Mathematics of Data Models, Human Computer Interaction

## TECHNICAL SKILLS

**Languages & Libraries:** Python, Java, SQL, JavaScript, TypeScript, HTML, CSS, React, Tailwind, Node.js, Next.js

**Frameworks & Tools:** Git, Docker, PostgreSQL, Azure, AWS, Scrum, Figma, Openshift, NumPy, Pandas, Flask

## PROFESSIONAL EXPERIENCE

**Full-Stack Software Engineering Co-op** | MORSE Corp

*July 2025 - Present*

*React, Typescript, Zustand, Python, Docker, Just, RESTful APIs, Vite, Celery, Docker, RabbitMQ*

- Engineering React features with Python integrations powering a data management platform for 200+ daily users.
- Optimizing data usability through responsive visualizations and dynamic filtering using server-side pagination.
- Deploying Dockerized Celery workers for async tasks triggered by endpoints, reducing latency across workflows.
- Boosting throughput by 40% using RabbitMQ for inter-app messaging to trigger and integrate AI imaging model.

**Software Engineering Co-op** | MFS Investment Management

*July 2024 - Jan. 2025*

*Python, React, JavaScript, CSS, FastAPI, Openshift, JSON, Jira API, Azure API, Bitbucket API, Coralogix API*

- Streamlined Jira ticket processing and onboarding workflows, creating automatic handling for 1000+ tickets monthly.
- Developed a React metrics dashboard integrating 7 APIs to draw, process, and manipulate real-time data insights.
- Collaborated on automating CI/CD pipelines using OpenShift and Jenkins, driving scalability in software delivery.
- Drove 20% increase in efficiency for company's backend processes leveraging Python and Kubernetes clusters.

**Undergraduate Research Assistant** | Northeastern University

*Sep. 2023 - Dec. 2023*

*Python, OpenAI API, Decorators, Hypothesis, Large Language Models, Research & Development*

- Researched potential use-cases and limitations of AI-driven code autocompletion using Python and OpenAI API.
- Achieved regeneration score accuracy of 93% for AI-generated code upon detecting errors in the dependent functions.
- Enhanced query-response accuracy by a system of classes and decorators which appends specs and tests to query.
- Collaborated with professors to develop assignments enhancing design thinking skills for CS students using Synth.

**Software Project Manager** | TAMID Tech Consulting Group

*June 2023 - Dec. 2023*

*GitHub Enterprise, Jira, Docker, Node.js, React, Flask, PostgreSQL, SQLAlchemy, Notion API, Scrum*

- Led a full-stack team of 6 developers to execute a dashboard aimed at optimizing TAMID's recruitment process.
- Utilized Node.js and React to create an intuitive and responsive dashboard interface, enhancing UX and accessibility.
- Orchestrated data cleaning, analysis, and database management to maintain 16+ semesters of recruitment data.
- Implemented Agile methodologies to streamline development, ensuring on-time delivery of defined project milestones.

## PROJECTS

**AI-Powered Algorithm Learning Tool** | *Python, FastAPI, PostgreSQL, Playwright*

*Aug. 2025 - Present*

- Building an AI LeetCode tutor using OpenAI embeddings + pgvector to identify and teach problem-solving strategies.
- Producing reusable study templates by utilizing clustering and retrieval (K-Means + vector search) to group strategies.
- Optimizing learning efficiency by developing a full-stack platform using PostgreSQL, Playwright, and telemetry.

**YogaFlow** | *React, Next.js, Flask, MongoDB, Figma*

*Nov. 2024 - Feb. 2025*

- Developed a mobile app with AI-driven pose recommendations, using algorithms to optimize sequence construction.
- Led product development by gathering insights from 15+ yoga instructors, refining user-centric Figma prototypes.
- Engineered a scalable backend managing 100+ poses with attributes for muscle groups, sequencing, and timing.

**Battleship AI Bot** | *Java, Sockets, JSON, MVC, OOD*

*June 2023*

- Built a command-line Battleship game in Java, with socket-enabled multiplayer and an integrated AI opponent.
- Applied object-oriented programming principles using MVC architecture, improving modularity and maintainability.
